

Who Moved My Tower? How to survive in the non-towered environment.

With 149 Air Traffic Control Towers scheduled to be closed in the next two months, many pilots could use a refresher on how to safely operate at non-towered airports. This is a brush up on standard traffic patterns, not so standard patterns, procedures unique to BTL, and proper pattern etiquette. Collision avoidance, preflight, and radio techniques will be covered.

Directions: Western Michigan University Aviation located on the Battle Creek Airport (BTL)
237 North Helmer Road, Battle Creek, Michigan, first building directly South of the oldest control tower building.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
